The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-11, 20-25, and 31-46 are rejected under 35 U.S.C. 102(e) as being anticipated by Nick U.S. Patent No. 6,003,012.

Referring to claim 1. Nick discloses a method for selling engineered electrical systems (Abstract), the method comprising the steps of:

- Generating a database for an electrical system comprising a plurality of programmable devices, the database including device designation data (Fig. 10);
- Soliciting an order for the system (Fig. 6, "Step 191");
- Assembling the system including the plurality of programmable devices (Abstract); and
- Configuring memory objects within the devices based upon the database (Fig. 10 and column 19, lines 46-67).

Referring to claim 2. Nick further discloses a method comprising the step of designing the electrical system including the plurality of programmable devices (Fig. 6 and column 13, line 6 to column 14, line 30).

Referring to claim 3. Nick further discloses a method wherein the device designation data includes data representative of a physical location of a device in the system (Fig. 2 and column 13, line 6 to column 14, line 30).

Referring to claim 4. Nick further discloses a method wherein the device designation data includes data representative of a function of a device in the system (Fig. 6 and column 20, lines 46-61).

Referring to claim 5. Nick further discloses a method wherein the step of soliciting the order includes computing price data, based upon the database (column 20, lines 15-34).

Referring to claim 6. Nick further discloses a method comprising the step of storing the database in a computer coupled to the system (Fig. 10).

Referring to claim 7. Nick further discloses a method wherein the system includes a plurality of subassemblies, at least a portion of the subassemblies including at least one programmable device, and wherein the memory objects of the programmable devices are configured after arrangement of the devices on the subassemblies (column 12, line 35 to column 13, line 6).

Referring to claim 8. Nick further discloses a method wherein the memory objects of the programmable devices are configured prior to arrangement of the subassemblies in the system (Figs. 10, 11, and 12).

Art Unit: 3625

Referring to claim 9. Nick further discloses a method wherein the memory objects of the programmable devices are configured after arrangement of the subassemblies in the system (Figs. 10, 11, and 12).

Referring to claim 10. Nick further discloses a method wherein the programmable devices include electrical power switching devices mounted within an enclosure (Abstract).

Referring to claim 11. Nick further discloses a method wherein the system includes a motor control center (Abstract).

Referring to claim 20. Claim 20 is rejected under the same rational as set forth above in claim 1.

Referring to claim 21. Nick further discloses a method wherein the programmable components are programmed by downloading a portion of the database into each programmable component (Fig. 10 and column 19, lines 46-67).

Referring to claim 22. Claim 22 is rejected under the same rational as set forth above in claim 3.

Referring to claim 23. Nick further discloses a method wherein the step of programming the programmable components is performed following final assembly of the components in the system (Figs. 10, 11, and 12).

Referring to claim 24. Nick further discloses a method wherein the step of assembling the system includes coupling the programmable components to a data network in the system for accessing data from each programmable component (column 20, lines 1-14).

Art Unit: 3625

Referring to claim 25. Nick further discloses a method wherein the programmable components are programmed via the data network (column 20, lines 1-14).

Referring to claim 31. Claim 31 is rejected under the same rational as set forth above in claim 1.

Referring to claim 32. Claim 32 is rejected under the same rational as set forth above in claim 4.
